Warranty Validation Procedure

To ensure the customer has a valid one (1) year warranty claim:

1. Make sure the customer has tested the voltage drop in the pump circuit.
2. Make sure a new strainer, fuel filter and/or wire harness (where applicable) were purchased with the pump. Also, be sure the fuel lines are flushed and the fuel tank cleaned prior to installation.
3. Recommend to the customer that they go to www.carterfueldelivery.com for proper diagnosis and installation procedures.

Go with Carter and be assured of a job done right – the first time!
